Carla Coleman is the patient navigator for “C a Difference”. Carla received her BSW from Temple in 2006 and her MBA with a concentration in Public Administration from Strayer in 2013. Carla has been working in public health for 13 years, her last position was at Delaware County Office of Services for the Aging (COSA) in the protective service unit.

Carla’s number is 267-507-6599. Please email Carla.Coleman@drexelmed.edu or task Carla Coleman to reach Carla about new positive patients or any other concerns.

LabCorp has replaced the HCV Antibody with Reflex to Quantitative Real-time PCR (144028) to the HCV Antibody with Reflex to HCV RNA, Qualitative, NAA (144045). If the prior test was ordered after 3/16, the results for the HCV test can be found under the new test name “HCV Antibody Reflex to NAA”.

The newest treatment guidelines released by AASLD have been released. For genotype 1, the most common in the US, Harvoni is recommended. Harvoni is a combination of Ledipasvir and Sofosbuvir given over the course of 12 weeks for treatment-naïve patients with or without cirrhosis.
